Professional Objective

I build web interfaces that are easy to understand and pleasant to use. At ID Energy, I work across the whole stack on IDEnergy System, but the front end is where I do my best work. I started out in QA at Intelbras, which taught me to think about the people using a product before writing the first line of code. That is the mindset I want to bring to a front-end or UI/UX role, on a team that cares about the user experience as much as the code.

Professional Experience

Feb 2025 – Present
Junior Software Developer at ID Energy (São José - SC)
- Responsible for planning, architecture, and development of new internal software
- Database structuring and optimization focused on performance and integrity
- UI/UX interface prototyping
- Continuous technical documentation for maintenance and scalability

Jun 2023 – Feb 2025
QA Intern at Intelbras (São José - SC)
- Assisted in software testing
- Helped describe issues identified during testing
- Supported maintenance of the network environment
- Contributed to updating test scenario documentation
- Aided in automated testing development
